

DRUG DELIVERY TECHNIQUES

The central nervous system (CNS) is made up of the brain and spinal cord

Motor neurons, the cells that stop working in motor neuron disease, are found in the CNS

The CNS is protected from toxins by a specialised layer of membranes...

Membrane

...But the membranes are so effective they can also prevent some treatments from getting in.

OUR RESEARCHERS ARE DEVELOPING NEW TECHNIQUES,

TO IMPROVE DELIVERY OF DRUGS TO MOTOR NEURONS IN MND
